

CPSC 100

Computational Thinking

Internet (Continued)

Instructor: Firas Moosvi
Department of Computer Science
University of British Columbia

Agenda

- How the internet works
- **Activity: Phishing**
- Debrief about how the internet collapsed!

Learning Goals

After this week's lectures, you should be able to:

- Compare and contrast server and client.
- Explain how data is transferred from one location to another across networks, such as the Internet
- Define some of the design features of TCP/IP networks, such as packets, routing, and domain names.
- Explain the roles of Internet addresses, domain names, and DNS servers in networking
- Create the diagram for the hierarchical structure of a webpage or file
- Identify patterns in URLs

Course Admin

Note about Test 8 on Internet

Assigned course videos about the Internet will not be available in the CBTF!

You will need to understand how things work.

How the Internet Works

These 4 videos are required watching for this course and is all examinable material !
